

# Math 225 - Midterm

## Fall 2019

Last Name: \_\_\_\_\_

First Name: \_\_\_\_\_

USC ID: \_\_\_\_\_

### Instructions:

- Unless otherwise indicated, please clearly show all of your work. Correct answers without justification may not receive credit.
- No calculators or other electronics are permitted for use. In particular, cell phones must be turned **off** and stored away.
- You may use one single-sided, handwritten A4 note sheet.
- No other notes or books may be used.

Question:	1	2	3	4	5	6	Total
Points:	5	9	7	8	6	5	40
Score:							

1. (5 points) Let  $V$  be an inner product space, and let  $u_1, u_2$  be fixed (nonzero) vectors in  $V$ . Define  $T : V \rightarrow \mathbb{R}$  by

$$T(v) = (\langle u_1, v \rangle, \langle u_2, v \rangle).$$

Use the properties of the inner product to show that  $T$  is a linear transformation.

2. (9 points) Consider the transformation  $T : P_2(\mathbb{R}) \rightarrow P_1(\mathbb{R})$  defined by

$$T(ax^2 + bx + c) = (a + b)x + (a - c),$$

where  $a, b$  and  $c$  are arbitrary real numbers.

- (a) (3 points) Show that  $T$  is a linear transformation.
- (b) (6 points) Determine  $\ker(T)$ ,  $\text{Im}(T)$ , and their dimensions.

3. (7 points) Determine an orthogonal basis for the subspace of  $C^0[-1, 1]$  spanned by  $f_1(x) = 1, f_2(x) = x^3, f_3(x) = x^4$ .

4. (8 points) Let  $A = \begin{bmatrix} 1 & 3 & -1 \\ 2 & 7 & 9 \\ 1 & 5 & 21 \end{bmatrix}$ ,  $b = \begin{bmatrix} 4 \\ 9 \\ 6 \end{bmatrix}$ . Find all the solution of the system  $Ax = b$ .

5. (6 points) Let  $V = C[0, 1]$  and for  $f$  and  $g$  in  $V$ , consider the mapping

$$\langle f, g \rangle = \int_{-1}^0 x^3 f(x) g(x) dx.$$

Does this defines a valid inner product on  $V$ ? Show why or why not.

6. (5 points) Define  $T : P_2(\mathbb{R}) \rightarrow P_1(\mathbb{R})$  by  $T(ax^2 + bx + c) = c$ . Determine whether  $T$  is 1-1, onto, or neither. Find  $T^{-1}$  or explain why it does not exist.
